Seasonal dock and boardwalk installation and repair

Above: Workers recently took advantage of light winds, sunshine and relatively warm weather to get started on the installation of floating dock segments at Tally's Dockside in White Bear Lake. The poles on the new dock configuration are scheduled to be installed this week.

At right: An early season angler catches a fish on the open water around recently installed docks on White Bear Lake.

At left: Prestige Dry Wall employees Tim Lembeck and Austin Hakes fix stairs and footings near the White Bear Lake boardwalk that were damaged during the winter when high winds pushed the docks into the shoreline.

Despite recent snow and rainfall, the lake level is still down. According to the White Bear Lake Conservation District website, a public hearing will take place at the April 16 WBLCD Board Meeting on requests for variance from Docks of White Bear Lake and Tally's Dockside to allow their docks to extend out from the Ordinary High Water Level (OHWL) beyond 300 feet (exiting limit) for the 2024 season.
